

5 April 2004

Dear Reader,

**Re: FREE Guides**

As part of the ongoing service offered to all of our customers we have published a series of easy-to-follow guides that are related to everyday, electrical engineering issues. The guides are completely **free** and are available to anyone that wishes to subscribe to them.

Should you like to receive any of these informative and colourfully illustrated mini-guides then please make your selection from the list below, put your name and address in the box provided and fax this document back to us on:-

**01588 672718**

- Transformers
- Power Quality
- EMC
- Power Regulation
- Power Quality for Variable Speed Drives

Also we have just launched the first of two books in a series of seventeen relating to immunity and emission testing of EMC phenomena. These mainly cover power quality issues.

- EN 61000-4-8 Power-frequency field immunity test – Testing and measurement techniques
- EN 61000-4-11 Testing and measurement techniques – Voltage dips, short interruptions and voltage variations immunity tests.

Other books in the series will be sent automatically to subscribers and these will contain guidance on such topics as harmonics, RFI, surges, transients, ESD and supply variations.

**DON'T FORGET TO SEND YOUR NAME AND ADDRESS**

Happy reading.

Yours sincerely,

John Symonds  
Managing Director
